

Distributed Transactions with CORBA

PROBLEMS WITH DISTRIBUTED TRANSACTIONS

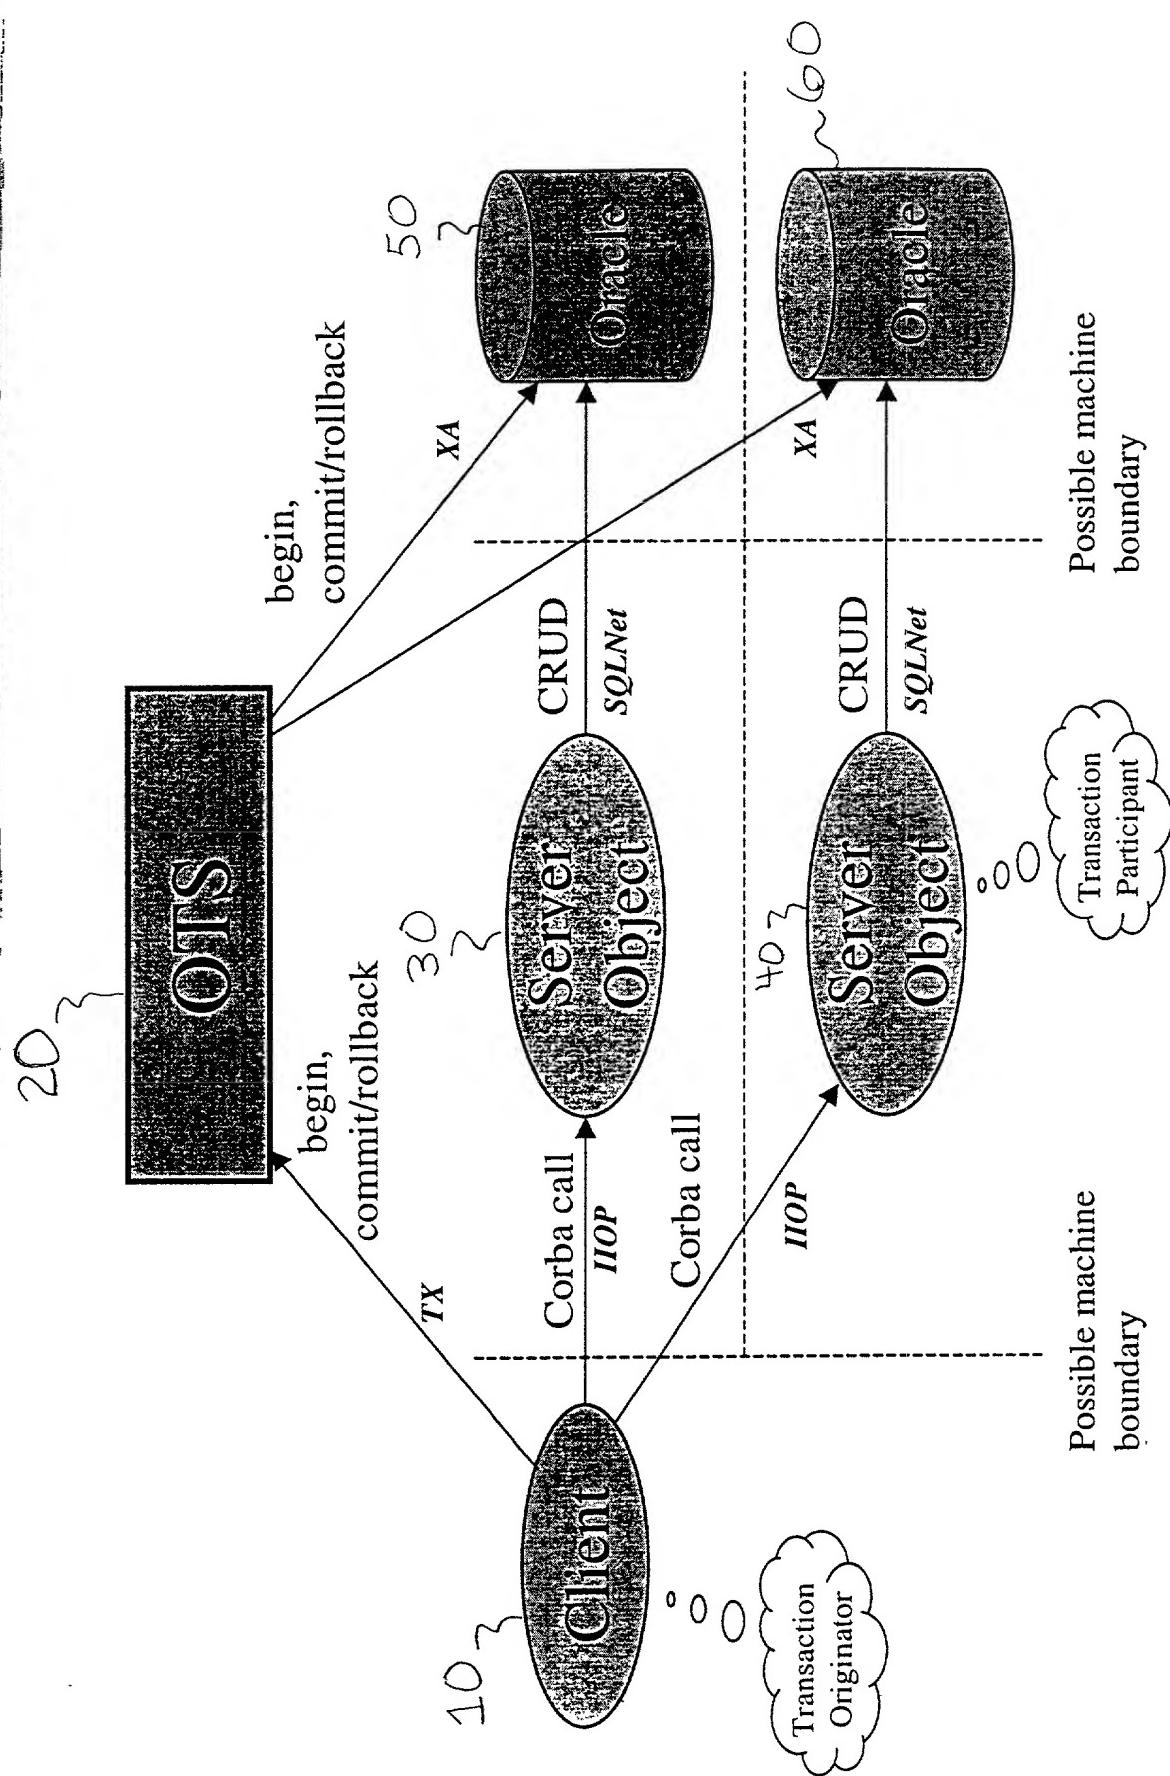

Figure 1

Distributed Transactions with CORBA

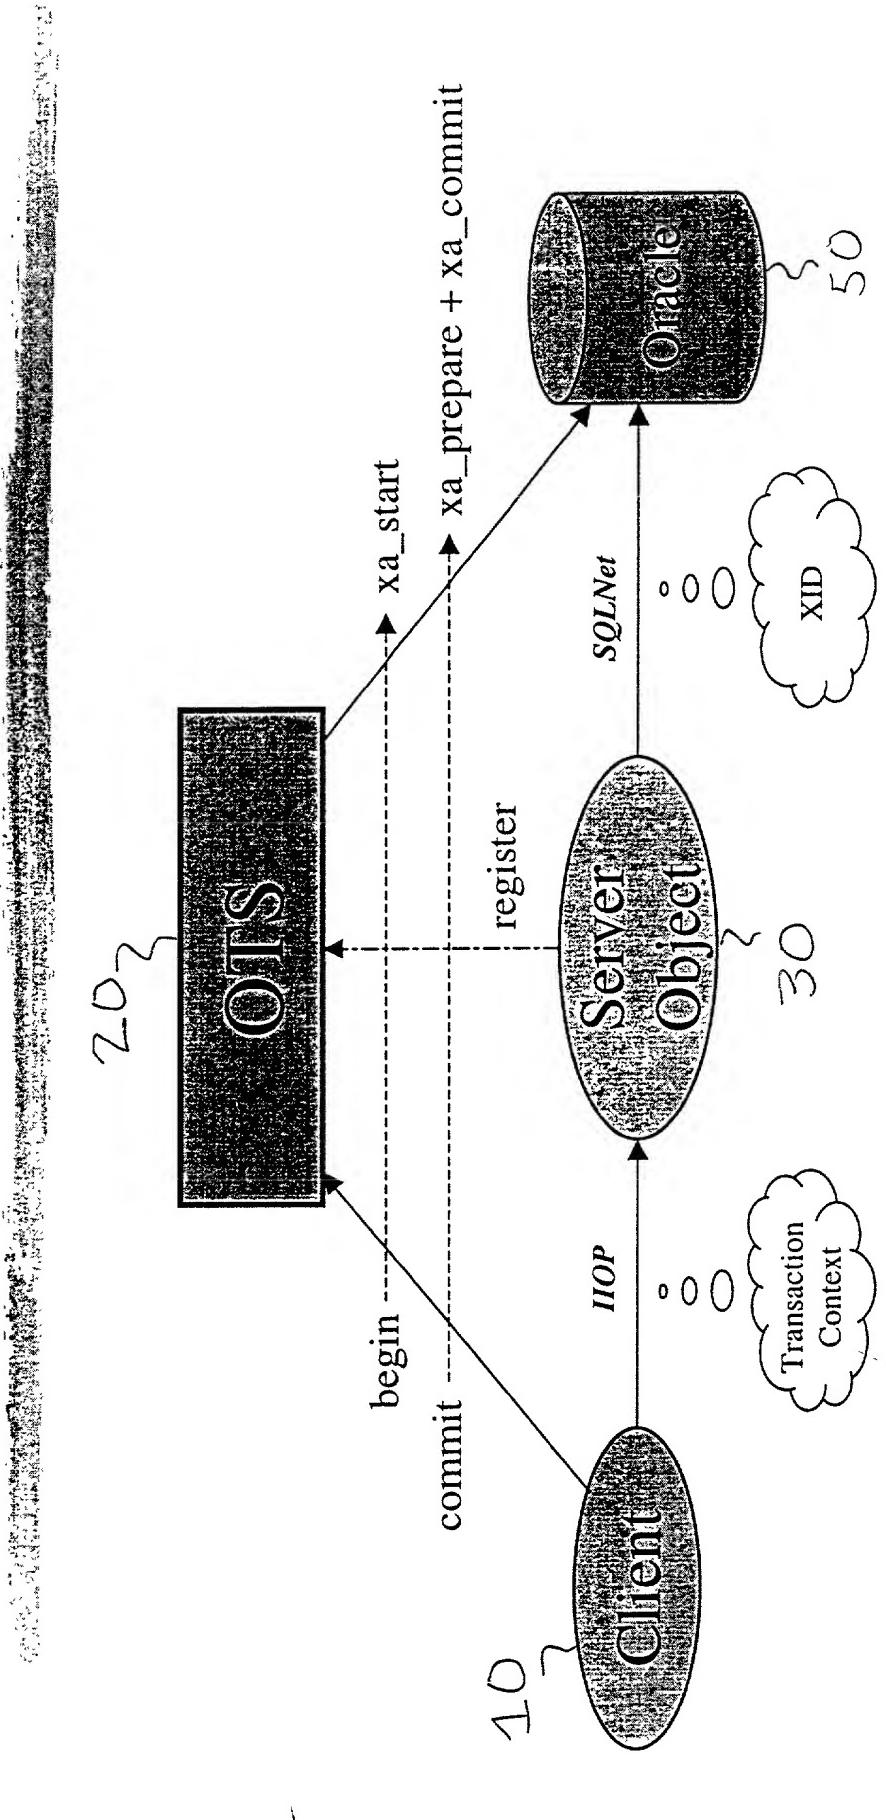

Figure 2

How does it work?

- What does ENCORE do on Client Side when I call “initialize”?

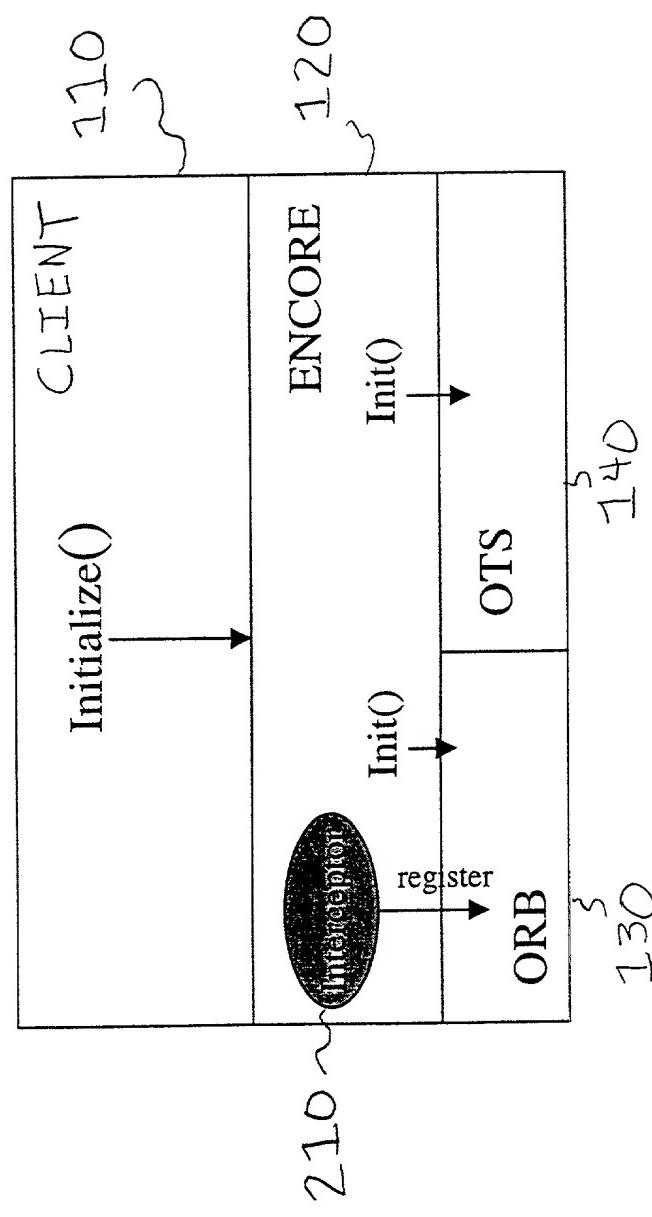

Figure 3

How does it work?

- What happens when I call beginTx()?

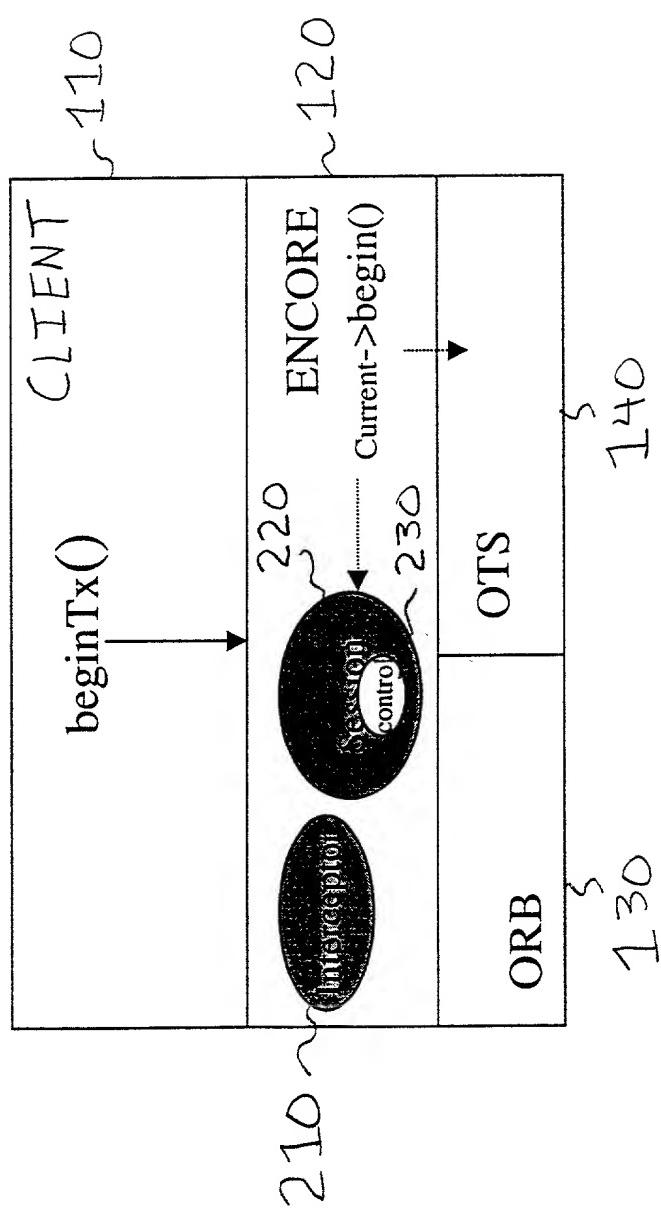

Figure 4

How does it work?

- What happens when I make a CORBA call?

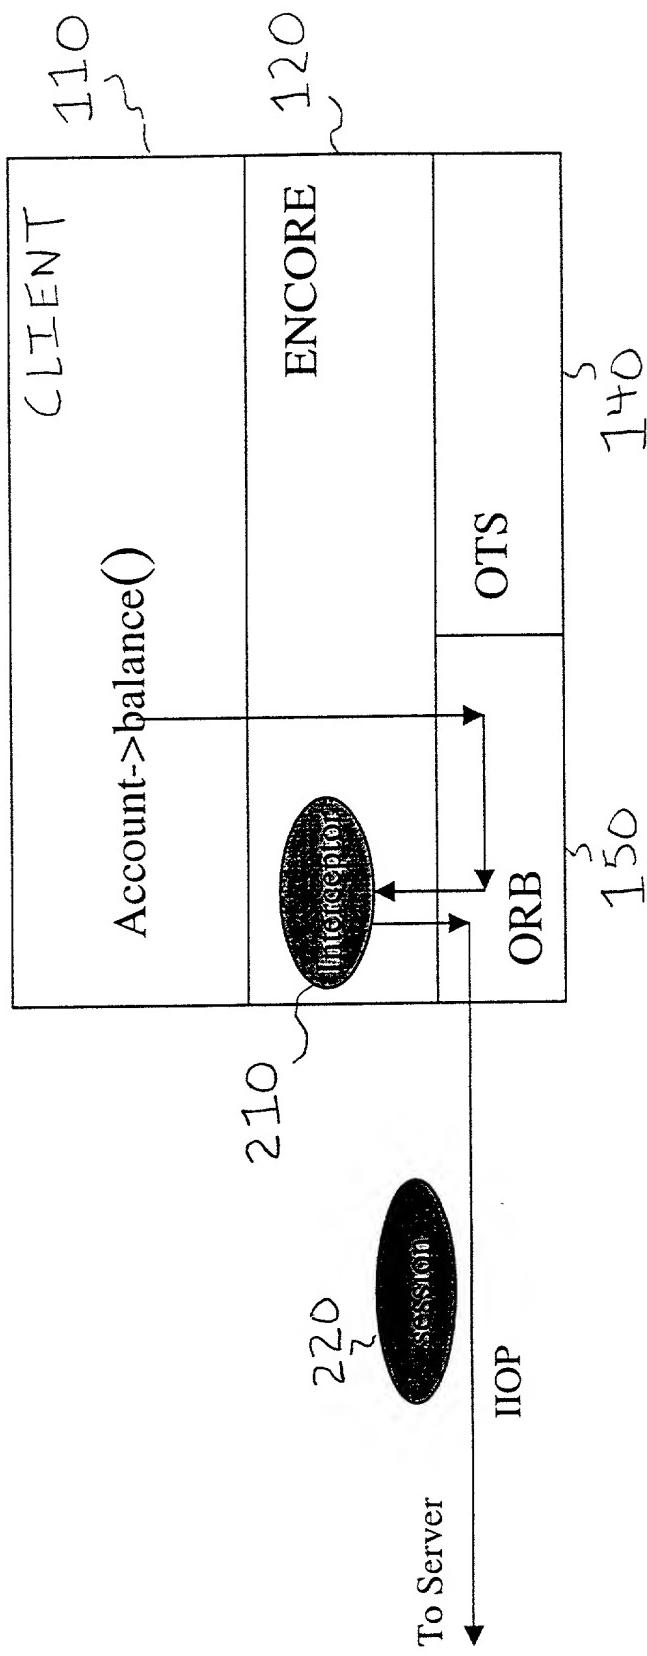

Figure 5

How does it work?

- What happens on the server side?

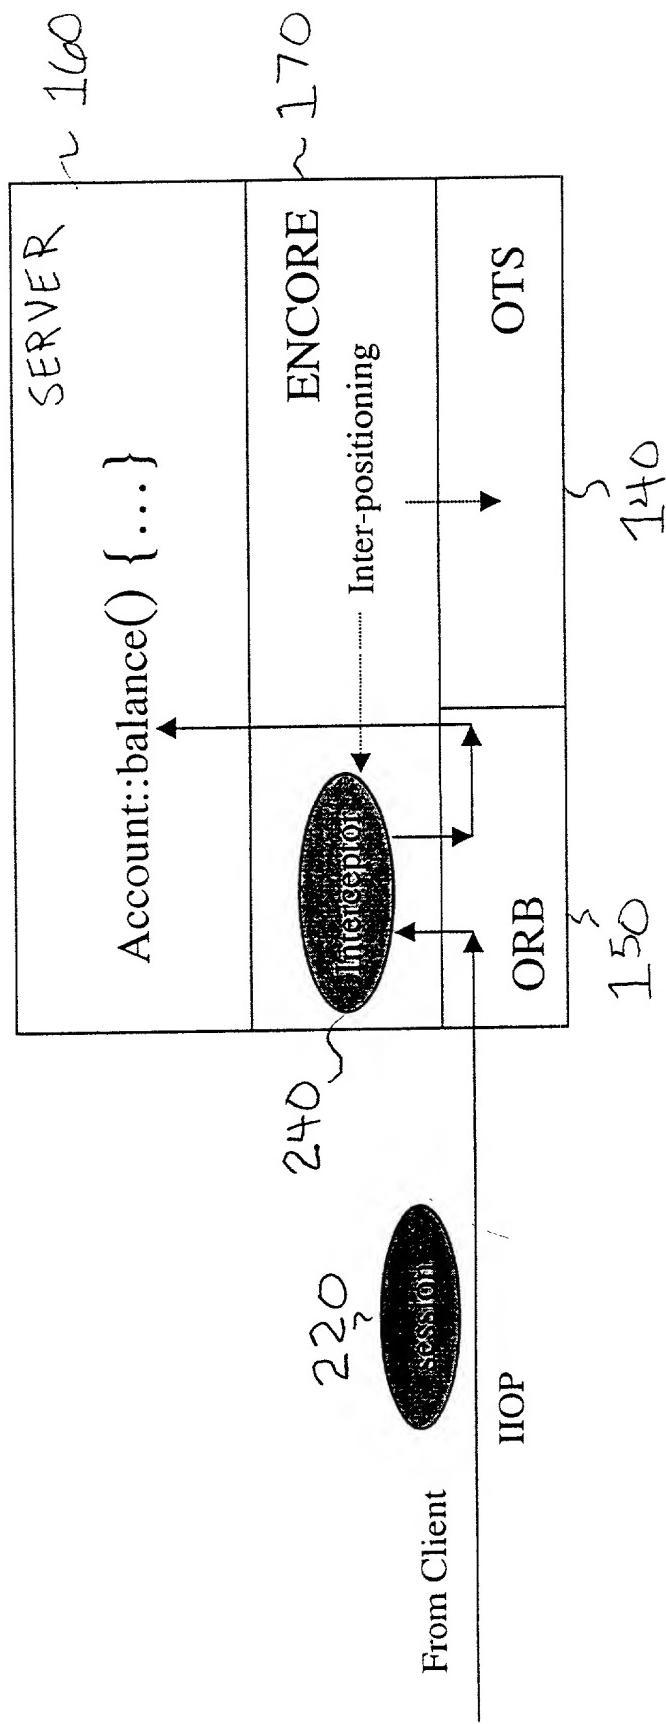

Figure 6
